- HYVA cylinder - unloading speed and optimal amount of oil
- Possibility of optimal load distribution by extending the field between the tarpaulin crossbars) + optionally, a movable tarpaulin
- Automatic deflection of the suspension during unloading - improved stability.

MEGA FORT

WE CHANGE THE FACE OF TRANSPORT.

Since 2017, without losing our Polish character, we have become part of the international Benalu Group. This fact opens a new chapter in our company and creates a new quality of the product.

We make every effort to provide you with vehicles with the best possible technical and durability parameters. Following the principle of "who does not move forward, retreats", we constantly develop and modify products based on user feedback. We are looking for technologies, solutions, materials and components that have a positive effect on safety, durability, lightness, modernity and comfort of use of our trailers.

We hope that the new generation of MEGA FORT vehicles will satisfy the most demanding users, that is you, and with you it will cover every road, deliver every load safely, to the place and on time.

The company MEGA Sp. z o.o. reserves the right to make changes to the used components and materials, technical parameters, colors, and other specification items. All information contained in this brochure should be treated as indicative, as they do not constitute an offer within the meaning of the Civil Code and are not binding.
